

LastPass

SaaS Protect

Turn SaaS visibility into action. Block risky apps, enforce credential hygiene, and reduce Shadow SaaS without disrupting your workforce.

From Visibility to Control

After gaining visibility into SaaS usage with LastPass SaaS Monitoring, many organizations still face a critical challenge: how to stop employees from using unapproved or risky apps. Shadow SaaS, credential misuse, and SaaS sprawl continue to expose businesses to security threats, compliance violations, and rising costs.

LastPass SaaS Protect solves these challenges by giving IT admins and business leaders the power to act—directly from the same dashboard. With just a few clicks, you can block, restrict, or grant access to apps and alert users to risky behavior, like weak or reused passwords.

Key Business Benefits

Enforce SaaS App Policies

Classify apps as Approved, Warn, or Blocked to control access and guide users with real-time messages.

Prevent Credential Attacks

Flag weak or reused passwords and prompt users to strengthen them.

Simplify Compliance

Generate audit-ready reports for SOC 2, HIPAA, GDPR, and more.

Cut SaaS Waste

Spot and remove duplicate, unused, or abandoned apps to reduce costs.
